<sup>1</sup> Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as:  
(N/EH) X 200,000, where

N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year,  
200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

<sup>2</sup> Total includes cases involving restricted work activity only in addition to days-away-from-work cases with or without restricted work activity.

<sup>3</sup> Days-away-from-work cases include those which result in days away from work with or without restricted work activity.
